

NAS100 London Range bot — Add To Winner results (trigger 0.7)

Prepared for Vanessa, 30 September 2026. Backtest 1 Jan 2021 – 28 Sep 2026, \$100,000 account, \$300 risk per trade, tick data, risk reduction to 70% at 0.7R, TP 4R. Control = the live bot with Add To Winner switched off. Every size is a real cTrader backtest.

1. At a glance

	Total risk after add	Net profit 2021–26	Increase vs control	Years beating control	cTrader max equity DD	Deepest drawdown (closed days)	Worst single day	Chance of hitting \$90k in next 12 months*	Typical 12-month profit*
Control	0.70R	\$31,412	—	—	4.04%	\$4,333 (4.3%)	-\$415	0.0%	\$6,126
Size 1	1.00R	\$37,337	+\$5,926 (+18.9%)	6 / 6	4.65%	\$5,145 (5.1%)	-\$415	0.0%	\$7,225
Size 2	1.30R	\$42,609	+\$11,198 (+35.6%)	6 / 6	5.22%	\$5,960 (6.0%)	-\$496	0.1%	\$8,336
Size 3	1.60R	\$47,874	+\$16,462 (+52.4%)	6 / 6	5.78%	\$6,784 (6.8%)	-\$598	0.2%	\$9,375
Size 4	1.90R	\$53,162	+\$21,750 (+69.2%)	6 / 6	6.32%	\$7,613 (7.6%)	-\$702	0.6%	\$10,432
Size 5	2.20R	\$58,447	+\$27,035 (+86.1%)	6 / 6	6.83%	\$8,442 (8.4%)	-\$804	1.2%	\$11,495
Size 6.5	2.65R	\$66,353	+\$34,941 (+111.2%)	6 / 6	7.56%	\$9,685 (9.7%)	-\$958	2.5%	\$12,978
Size 10	3.70R	\$84,820	+\$53,408 (+170.0%)	6 / 6	9.10%	\$12,583 (12.6%)	-\$1,317	8.3%	\$16,422

* Starting from a fresh \$100,000 using the risk ladder with the 4-loss rule (see section 4). All money figures in sections 1–3 are at \$300 risk; at \$500 multiply by 1.67.

2. Profit year by year (at \$300 risk)

Year	Control	Size 1	Size 2	Size 3	Size 4	Size 5	Size 6.5	Size 10
2021	\$4,329	\$5,312 +\$982 (+22.7%)	\$6,309 +\$1,980 (+45.7%)	\$7,306 +\$2,976 (+68.8%)	\$8,305 +\$3,976 (+91.8%)	\$9,305 +\$4,975 (+114.9%)	\$10,805 +\$6,476 (+149.6%)	\$14,291 +\$9,962 (+230.1%)
2022	\$9,332	\$10,451 +\$1,119 (+12.0%)	\$11,634 +\$2,302 (+24.7%)	\$12,818 +\$3,486 (+37.4%)	\$14,003 +\$4,671 (+50.1%)	\$15,188 +\$5,856 (+62.7%)	\$16,966 +\$7,634 (+81.8%)	\$21,110 +\$11,778 (+126.2%)
2023	\$4,024	\$4,564 +\$540 (+13.4%)	\$5,133 +\$1,109 (+27.6%)	\$5,702 +\$1,678 (+41.7%)	\$6,273 +\$2,249 (+55.9%)	\$6,846 +\$2,822 (+70.1%)	\$7,698 +\$3,674 (+91.3%)	\$9,696 +\$5,671 (+140.9%)
2024	\$4,519	\$4,875 +\$356 (+7.9%)	\$5,246 +\$727 (+16.1%)	\$5,612 +\$1,093 (+24.2%)	\$5,988 +\$1,468 (+32.5%)	\$6,357 +\$1,838 (+40.7%)	\$6,906 +\$2,387 (+52.8%)	\$8,206 +\$3,687 (+81.6%)
2025	\$4,708	\$5,464 +\$757 (+16.1%)	\$6,224 +\$1,516 (+32.2%)	\$6,982 +\$2,274 (+48.3%)	\$7,742 +\$3,034 (+64.5%)	\$8,501 +\$3,793 (+80.6%)	\$9,636 +\$4,928 (+104.7%)	\$12,301 +\$7,593 (+161.3%)
2026 (to 28 Sep)	\$4,499	\$6,671 +\$2,172 (+48.3%)	\$8,063 +\$3,564 (+79.2%)	\$9,454 +\$4,955 (+110.1%)	\$10,851 +\$6,353 (+141.2%)	\$12,250 +\$7,751 (+172.3%)	\$14,342 +\$9,843 (+218.8%)	\$19,216 +\$14,717 (+327.1%)
Total	\$31,412	\$37,337 +\$5,926 (+18.9%)	\$42,609 +\$11,198 (+35.6%)	\$47,874 +\$16,462 (+52.4%)	\$53,162 +\$21,750 (+69.2%)	\$58,447 +\$27,035 (+86.1%)	\$66,353 +\$34,941 (+111.2%)	\$84,820 +\$53,408 (+170.0%)
Smallest yearly gain over control	—	+\$356	+\$727	+\$1,093	+\$1,468	+\$1,838	+\$2,387	+\$3,687
Profit made by the adds	—	\$5,259	\$10,532	\$15,796	\$21,084	\$26,369	\$34,275	\$52,742

Green = extra profit compared with the control in the same year. Every size beat the control in every year.

3. Winning days and losing streaks (main trade + add counted as one day)

	Trading days	Winning days	Daily win rate	Losing days per winning day	Longest losing run (days)	Losing runs of 4+ days	Deepest drawdown at \$300	Deepest drawdown at \$500
Control	634	229	36.1%	1.77	11	33	\$4,333	\$7,221
Size 1	634	228	36.0%	1.78	11	34	\$5,145	\$8,574
Size 2	634	227	35.8%	1.79	11	34	\$5,960	\$9,934
Size 3	634	225	35.5%	1.82	11	35	\$6,784	\$11,307
Size 4	634	225	35.5%	1.82	11	35	\$7,613	\$12,689
Size 5	634	224	35.3%	1.83	11	35	\$8,442	\$14,070
Size 6.5	634	221	34.9%	1.87	11	36	\$9,685	\$16,141
Size 10	634	216	34.1%	1.94	11	37	\$12,583	\$20,972

The add does not change how often you win or how long losing streaks last — it only makes the winning days bigger and the losing days slightly bigger (because the add sometimes stops out too).

4. Risk of hitting FTMO's \$90,000 floor (blowing the challenge)

5,000 simulated futures built from real runs of 10 consecutive trading days, so real losing streaks stay intact. NAS100 bot on its own — the US500 bot will add its own risk. **Risk ladder:** \$104k+ → \$500, \$98k+ → \$400, \$95k+ → \$300, below → \$200; one level lower after 4 losing days in a row until the next winning day.

	From \$100,000: fixed \$300	From \$100,000: fixed \$500	From \$100,000: risk ladder	Increase in risk vs control (ladder)	Over 3 years (ladder, approx.)	Bad year, 1 in 10 (ladder, from \$100,000)
Control	0.0%	1.6%	0.0%	—	0.0%	-\$1,959
Size 1	0.2%	3.1%	0.0%	+0.0 points	0.1%	-\$2,258
Size 2	0.4%	4.7%	0.1%	+0.1 points	0.2%	-\$2,559
Size 3	0.7%	7.0%	0.2%	+0.2 points	0.7%	-\$2,954
Size 4	1.5%	8.8%	0.6%	+0.6 points	1.8%	-\$3,310
Size 5	2.3%	11.6%	1.2%	+1.2 points	3.6%	-\$3,862
Size 6.5	4.2%	15.6%	2.5%	+2.5 points	7.3%	-\$4,578
Size 10	8.7%	25.5%	8.3%	+8.3 points	22.9%	-\$5,806

5. Typical profit over 12 months (median of the simulations, from \$100,000)

	Fixed \$300	Fixed \$500	Risk ladder	Increase vs control (ladder)	Replay 2021–26 with ladder from \$100k: final balance	Replay: deepest drawdown
Control	\$5,158	\$8,597	\$6,126	—	\$148,899	\$6,853
Size 1	\$5,998	\$9,996	\$7,225	+\$1,098 (+17.9%)	\$158,270	\$7,870
Size 2	\$6,815	\$11,358	\$8,336	+\$2,210 (+36.1%)	\$166,284	\$9,136
Size 3	\$7,600	\$12,667	\$9,375	+\$3,249 (+53.0%)	\$173,983	\$10,404
Size 4	\$8,443	\$14,071	\$10,432	+\$4,305 (+70.3%)	\$182,463	\$11,671
Size 5	\$9,286	\$15,476	\$11,495	+\$5,369 (+87.6%)	\$190,282	\$12,937
Size 6.5	\$10,532	\$17,554	\$12,978	+\$6,851 (+111.8%)	\$202,801	\$14,835
Size 10	\$13,447	\$22,412	\$16,422	+\$10,296 (+168.1%)	\$234,748	\$19,449

6. How to read this, in plain English

- **Profit goes up in a straight line with size.** Each extra step of add size adds roughly \$5,300 over the 5¾ years at \$300 risk (about \$8,800 at \$500). It beat the control in every single year, at every size.
- **Risk goes up faster than profit at the big sizes.** The chance of hitting \$90k stays tiny up to size 3, then climbs: each extra size step costs more risk than the one before.
- **Risk adds up over time.** A 3% chance per year is roughly a 9% chance over three years. The US500 bot will add its own risk on top, so the combined account needs a single budget. Suggested: no more than 2–3% a year chance of hitting \$90k for both bots together.
- **Win rate and losing streaks don't change.** About 36% of days win at every size, and the longest losing run stays at 11 days. What changes is how much a bad run costs.
- **The ladder is what keeps you safe.** Dropping risk as the balance falls cuts the chance of hitting \$90k sharply compared with a fixed \$500 (size 3: 7.0% down to 0.2%) — see section 4.
- **Size 10 is the 'greed' test.** Its worst losing run cost \$12,534 at \$300 risk (\$20,890 at \$500), more than the \$10,000 of room a fresh \$100k account has above \$90k. It only survived the backtest because the run came when the account was already at about \$143k.
- **Settings for sizes above 4.33:** raise 'Max Total Risk' to at least the 'total risk after add' figure (size 5 → 2.2, size 6.5 → 2.7), otherwise the add gets capped.
- **Caveats:** backtests are not guarantees; strategies usually earn less after going live. The simulations reuse 2021–26 behaviour — a new kind of market could be worse. Please double-check with FTMO that a payout resets the balance to \$100k with the floor staying at \$90k.
